

Implementing Marine Spatial Planning in Victoria

Marine Spatial Planning (MSP)

Marine Spatial Planning (MSP) is a practical way to organise marine space, and the interactions among human uses and between these uses and the marine environment.

While not all marine planning and management may require an MSP process, it can be beneficial where decision making is likely to be complex, challenging or where managing individual activities and uses may be inadequate.

MSP provides a process for assessing where activities and uses may be compatible or incompatible, and where activities and uses (either individually or cumulatively) conflict.

Undertaking an MSP process can have significant benefits including proactively identifying and reducing conflicts between uses, and between uses and natural values, to help protect economic, social, cultural, and environmental values linked to the marine environment.

It can be used to support sustainable growth of Victoria's blue economy and climate adaptation planning.

The output of an MSP process is a Marine Plan, which is a strategic document that helps to structure and guide management decisions in the area to which the plan applies.

How will MSP be undertaken in Victoria?

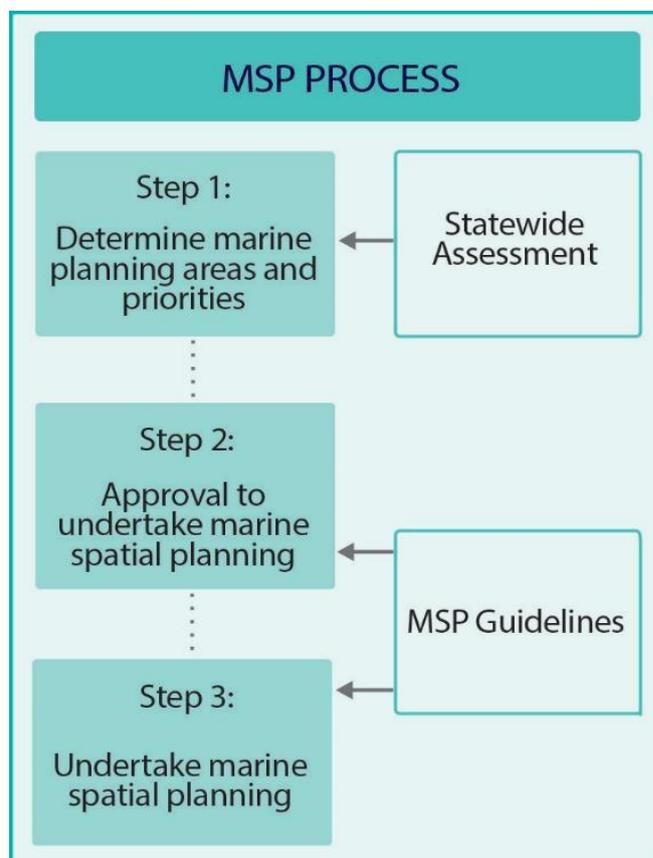

The Department of Environment, Land, Water and Planning (DELWP) is leading implementation of MSP in Victoria, engaging with Traditional Owners and Aboriginal communities, industry, the wider community, and government agencies during the process.

The process for initiating, approving, and undertaking MSP in Victoria is outlined in the Marine Spatial Planning Framework (MSP Framework), part of the *Marine and Coastal Policy 2020*.

The three-step process consists of:

- Step 1: determine marine planning areas and identify priorities for marine spatial planning
- Step 2: seek approval to undertake MSP using a mechanism in the *Marine and Coastal Act 2018*
- Step 3: undertake MSP.

Implementation of Step 1 will occur through a Statewide Assessment. Steps 2 and 3 will be supported by the development of guidelines (MSP Guidelines) that will provide instructions on how to undertake MSP.

What will the Statewide Assessment involve?

The Statewide Assessment will build on the Victorian Environmental Assessment Council's (VEAC) 2019 *Assessment of the Values of Victoria's Marine Environment*.

Marine Spatial Planning Factsheet

When determining marine planning areas, the Statewide Assessment will consider previously defined bioregions and biounits, physical and biological attributes, jurisdictional boundaries, distribution and extent of use and activity, and associated values and threats.

A prioritisation process will then occur to identify priority areas for undertaking more detailed MSP. This prioritisation will be guided by the presence of multiple activities and uses within an area, and the presence of clearly identifiable issues or opportunities (e.g. degradation of marine environmental values, new/emerging activities and uses, existing or anticipated threats or risks).

What are the MSP Guidelines and who are they for?

The MSP Guidelines will provide instructions on how to undertake an MSP process in a planning area. These instructions will further detail the steps outlined in the MSP Framework including how to:

- plan and organise MSP
- set a vision, goals, and objectives
- assess the characteristics of an area and analyse conflicts, compatibilities, and impacts
- select management approaches and develop a Marine Plan.
- implement, monitor, and refine a Marine Plan.

The MSP Guidelines will outline each step in the process to provide a minimum standard or approach. The MSP Guidelines are primarily intended to support those responsible for planning and management of marine and coastal areas, resources and uses.

Timing

Targeted consultation on the Statewide Assessment and MSP Guidelines will be undertaken in mid-2021. A final Statewide Assessment and MSP Guidelines are planned for release in late 2021.

Next steps

Following completion of the Statewide Assessment and MSP Guidelines, DELWP will then continue to implement the MSP Framework by scoping and initiating the first marine spatial planning process in a priority area identified through the Statewide Assessment.
